

Walk into the review with their whole financial life on one page.

Swiss hosted planning that turns statements, pensions and property into one funded plan, so your client sees where they stand and you see where you can help next.

EXTERNAL ASSET MANAGERS · WEALTH MANAGERS · RIAs · FAMILY OFFICES
PRIVATE, CANTONAL AND REGIONAL BANKS · PENSION ADVISERS · TRUSTEES

Everything you need to walk in with a plan, not a pitch.

Simulation engine

Show a client the probability their goals are funded, live in the meeting, with confidence bands and scenarios side by side.

Private wealth planning

Your client’s whole balance sheet, including what they hold elsewhere, funded against prioritised goals. Shortfalls and surpluses surface on their own.

Portfolio analytics

Grade how your client’s portfolio really sits on risk, return and concentration. This is where the case for moving their outside accounts begins.

AI Builder & document intake

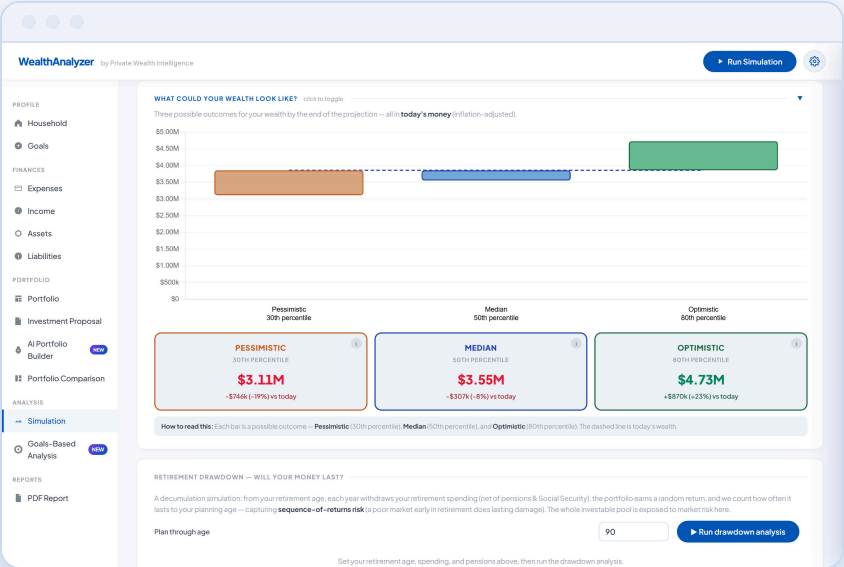

AI drafts the recommendation and reads client documents into the plan, so you arrive prepared instead of spending the week preparing.

Proposal & reporting

Branded proposals with your reasoning written down, so your client leaves holding something they will show the friend who asks who manages their money.

Specialist analytics

Drawdown sequencing, pension and tax drag, estate and beneficiary analysis: the questions that keep clients awake, answered in the meeting.

Actual product: Monte Carlo outcomes for a fictional demo household

Thirteen integrated modules, live today. **Clients choose the advisor who shows them a plan.**

One platform, all sizes of firm.

Independent firms

External asset managers · Wealth managers · RIAs · IFAs

Enterprise grade planning without an enterprise project. White label per firm, live in weeks, priced for lean advisory desks.

Family and fiduciary

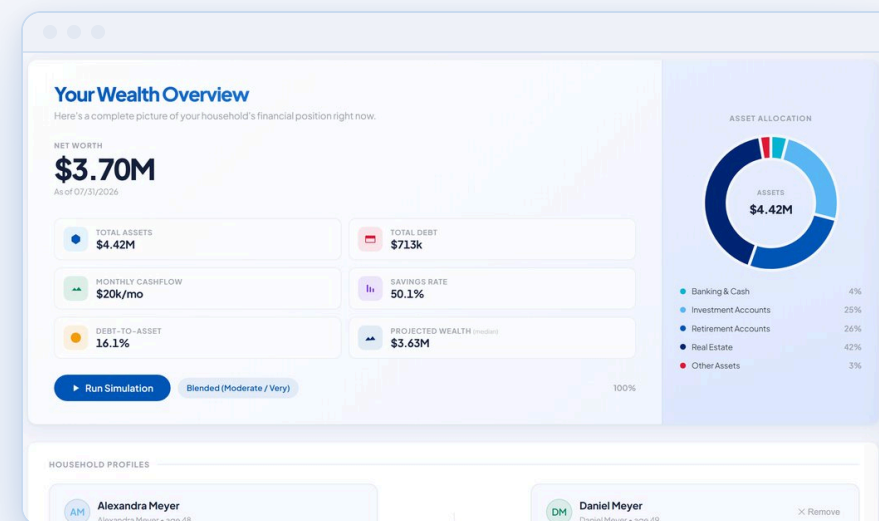

Family offices · Multi-family offices · Trustees and fiduciaries

The genuinely whole balance sheet: bankable and non-bankable, entities and property, estate and beneficiaries across 39 countries.

Banks and specialists

Private banks · Cantonal and regional banks · Pension advisers

Tenant isolated and core integration ready, with Swiss pillars modelled as distinct, correctly locked accounts.

Actual product: the household overview every segment starts from

One engine underneath, **your brand on top**, and the same result in every segment: **more of each client's wealth under your management.**

AI POWERED · ADVISOR CONTROLLED

From four client answers to a complete, documented draft portfolio in about 15 seconds.

It aggregates the published house views of 16 of the world's largest wealth and asset managers, then drafts an allocation for the client sitting in front of you.

1

Four simple questions

Investable amount, volatility comfort, time horizon and ESG preference, in language a client actually understands.

2

Curated universe only

The AI selects exclusively from a curated fund universe, filtered for the client's country and domicile eligibility. Nothing outside the approved list.

3

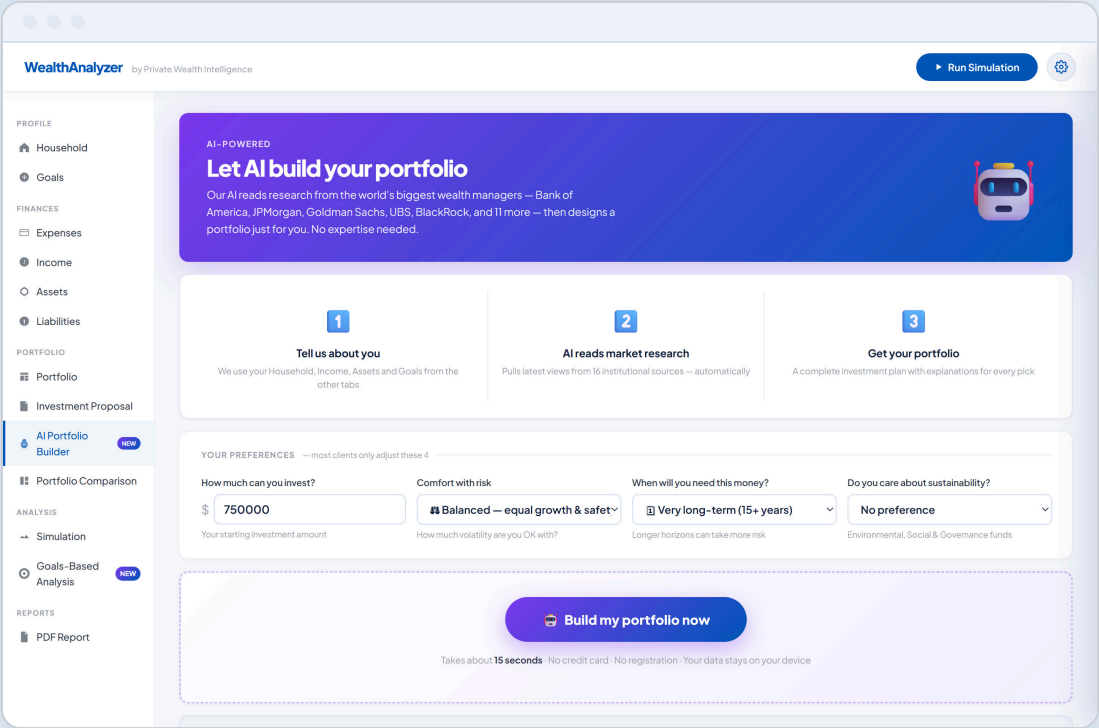

Real metrics, recomputed

Allocation, risk and cost figures are recalculated against the actual vehicles, not taken from the model's prose.

4

You review and apply

One click turns the draft into an investment proposal, once you have reviewed, edited and approved every line.

Actual product: the AI Portfolio Builder tab as advisors see it

AI does the drafting. **You stay the author** and walk in as the best prepared person in the room.

Every account you capture **is an account you can advise on.**

1

AI document intake

Statements, tax forms, policies, grant letters, spreadsheets, even a photo of a handwritten questionnaire, read into the plan in seconds. Every value arrives with a confidence score and the line it came from.

2

Statement import

CSV, XLSX, OFX and QFX from any custodian or bank, with controlled column mapping, so an outside portfolio sits beside yours while the client is still in the room.

3

Structured entry

500+ account types across 39 countries, each marked locked or liquid, capturing the property, pensions and private holdings no statement will ever show.

HUMAN IN CONTROL

AI and importers propose; your team approves. Nothing reaches the client's balance sheet unreviewed, and every figure stays attributable to the document it came from.

Intake surfaces accounts you never knew your client held. **That is the first step to bringing them under your management.**

From plan to investment proposal, in the same meeting.

1

Built from their plan

Every position traces back to the goals, risk profile and horizon you already captured. Nothing in the document is arbitrary.

2

Priced before you send it

Target match, gross and net return, advisory fee, weighted expense ratio and a risk score, recomputed against the actual vehicles.

3

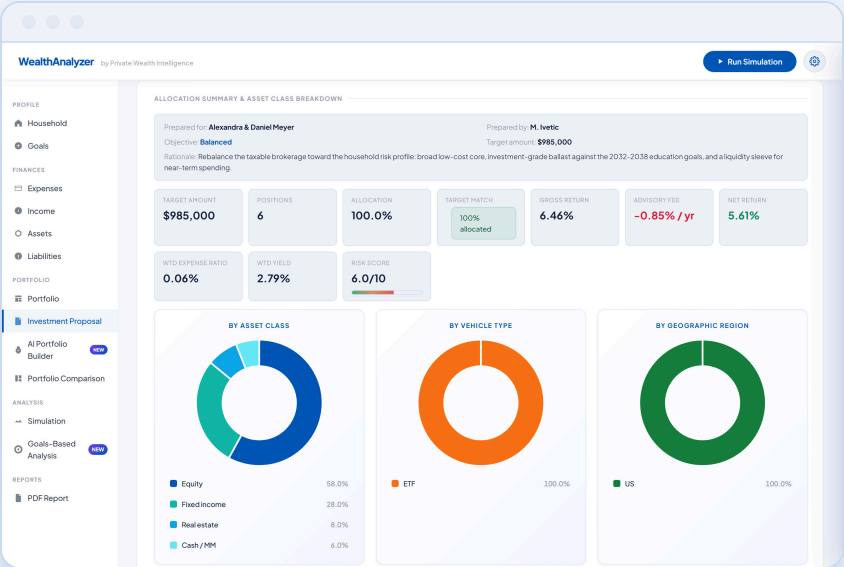

Your reasoning on the page

The rationale is written into the proposal, so your client and your investment committee both see why each holding is there.

4

Staged to your OMS, never executed

Approved positions leave as a staged ticket for your order management system. Nothing trades on its own; a person still releases it.

Actual product: an investment proposal for the fictional demo household

Preparation that used to take a week happens while your client is still in the room, **and the momentum stays with you.**

Depth your investment committee will respect, at a speed you will actually use.

Monte Carlo engine

Model the plan with and without the accounts a client holds elsewhere. The gap between those two scenarios makes the argument for you.

Cash flow projection

A year by year ledger to age 90, every figure inspectable. That is what turns a sceptical client into a confident one.

Risk & concentration

Risk, return and concentration measured across the whole household, so an underperforming outside account has nowhere to hide.

Retirement drawdown

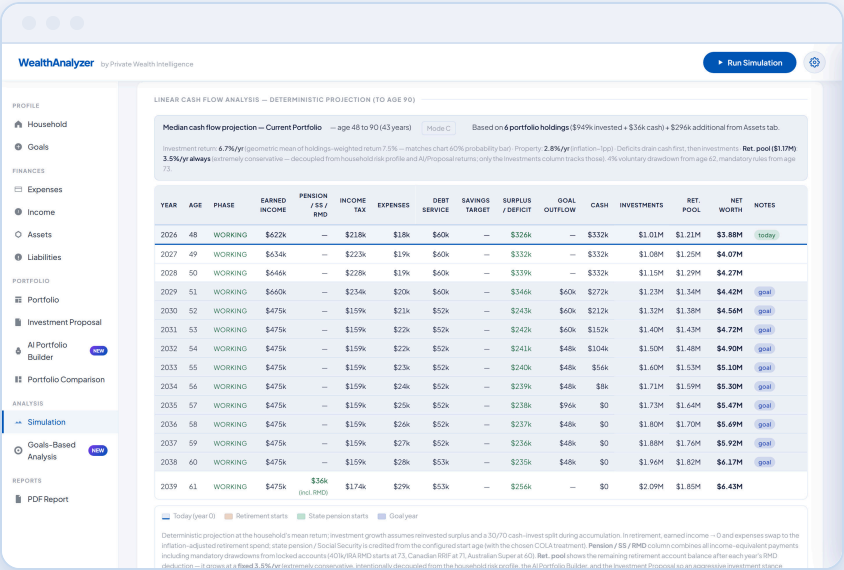

Will the money last, and how much can they safely spend. The two questions every client asks, answered with evidence rather than reassurance.

Estate & equity compensation

Beneficiary shares, transfer-at-death estimates and vesting schedules folded into the plan. That is how a relationship reaches the next generation.

Global households

39 countries, 500+ account types and region aware assumptions, so cross border families stop being the clients you cannot fully serve.

Actual product: deterministic cash flow projection to age 90 for the fictional demo household

When your client sees how their outside accounts perform against a funded plan, **moving them becomes their idea, not your pitch.**

More assets, longer relationships, and clients who send you others.

For you

- **Net new assets:** the whole wealth view surfaces what your client holds elsewhere, and the plan gives you a documented reason to ask for it
- **Growth in the book you have:** clients disclose more when the conversation covers their whole life, so more of each relationship moves under your management
- **Faster proposals:** meeting ready simulations and branded proposals in minutes, so preparation stops eating your evenings
- **Referrals you can earn:** a client who genuinely understands their plan explains it to other people, and that is where your next introduction comes from
- **You are the prepared one:** you walk in knowing more about their position than they expected anyone to know

For your client

- **They stay:** you become the counterpart for their entire financial life rather than one account among several. That is the relationship a competitor cannot dislodge
- **Peace of mind:** one complete picture of their whole wealth and goals, reviewed regularly, so they stop wondering whether anything has been missed
- **A client safe view:** a read only shared mode built for the meeting room, where clients see their story and not your controls
- **Their life, not a product list:** goals with calendar years and probabilities, in language they understand
- **Decisions they can defend:** they see the trade-off before they make it, not after

More disclosed wealth, more consolidated wealth, and a faster yes. **The planning conversation is the cheapest source of net new assets you already have.**

Swiss hosted, bank grade, and built for your risk review.

Swiss company, Swiss hosted

Private Wealth Intelligence is a Swiss GmbH. Client data is held on servers in Switzerland under Swiss data protection law, with residency committed in writing before onboarding.

Security on a par with your core

Security and privacy controls aligned with the standards required across the Avaloq ecosystem, so the planning layer meets the same bar as the platform your book of record runs on.

Tenant isolation

A dedicated, isolated tenant per institution. One firm's client data is never commingled with another's.

Connected to your systems

A hosted service that connects to your CRM and portfolio management systems, so you plan on the client and position data your firm already maintains.

AI use is scoped and disclosed

AI processing is limited to the task an advisor submits, runs through infrastructure you approve, and every output is reviewed before it enters the plan.

Independent assurance

We support your own assessment directly: security questionnaires, architecture review, and penetration testing by your team or a third party you nominate.

WHAT WE GIVE YOUR DUE DILIGENCE TEAM

A written architecture and data flow description, the hosting and data residency statement, the list of subprocessors your specific configuration uses, and a data processing agreement. Integration to your CRM and portfolio management systems is scoped with your IT team before anything goes live.

Your data stays in Switzerland and your systems stay authoritative. **The planning layer meets the same standards your core platform does.**

What it costs, what it takes, and what you get to check.

What it costs

From CHF 240

per advisor, per month, billed annually

- **All thirteen modules:** one price, with no per-household, per-plan or per-module charge
- **No implementation fee:** you pay for the software, not for a project to install it
- **Institutional licensing:** from CHF 60,000 a year, including a dedicated tenant, white label and integration scoping

What you can check first

Founding firms

the first five firms, at a rate held for 24 months

- **Your cases, not ours:** the first session runs on your own anonymised households, not a demo family
- **Real reviews:** your advisors take real client meetings on it before you commit further
- **Direct line to the roadmap:** what founding firms ask for is what gets built next

What your risk team gets

Everything, in writing

before a single client record is loaded

- **On paper:** architecture and data flow description, hosting and residency statement, subprocessor list, data processing agreement
- **On request:** your security questionnaire answered, and penetration testing by your team or a third party you nominate
- **On exit:** your plans export in a standard, readable format on request, at any time

AVALOQ

Onboarding onto the Avaloq platform is in progress. Security and privacy controls are aligned with the standards required across the ecosystem, and integration to your CRM and portfolio management systems is scoped with your IT team before anything goes live.

At five seats that is under CHF 15,000 a year. **One CHF 5M relationship brought back in covers it many times over.**

You run the wealth. **WealthAnalyzer** tells its story.

The session

Sixty minutes, run on your own anonymised households rather than a demo family, so you see your book in it before you decide anything.

The pilot

One team, real client reviews, measured on accounts surfaced, preparation time saved and proposals issued.

The rollout

White label to your brand and your domain, firm wide when the criteria you set are met, and not before.

NEXT STEP

A 60-minute working session: live product demo on cases like yours, plus a white label rollout plan for your firm covering one team, real client reviews and measurable success criteria.
